

Components of Eco WiFi : Key Elements and Features

ECO WiFi

As part of our commitment to sustainability within the IT industry, Smart Wireless have created an Eco WiFi solution which will help reduce waste, provide cost savings, and monitor your environment. The key elements of this solution can be easily deployed and will return immediate benefits. Once the hardware reaches end of life, we will recycle it for you via Cisco's circular economy program. Smart Wireless are proud to be an Environmental Sustainability Partner.

Cisco Circular Economy

The circular economy is an economic model designed to minimise waste and maximise the value of resources by keeping products, components, and materials in use for as long as possible. Cisco is committed to reach net zero emissions across their supply chain by 2040. A 100% of new products and packaging to incorporate circular design principles by 2025.

Managed Enterprise WiFi

All WiFi systems are not equal! Smart Wireless will provide a fully managed enterprise grade Cisco Meraki WiFi network. This will include all the components needed to connect your business to the internet. Support will include remote monitoring, remote diagnostics, and the replacement of any hardware for the duration of your contract.

Power Savings

The intelligence built in to the Cisco Meraki solution allows you to schedule the WiFi AP power to be switched on / off during times when the system is not being used. This will lower your power consumption leading to cost savings. The Cisco Meraki WiFi system will help pay for itself.

Smart Sensors

Cisco Meraki's portfolio includes a selection of smart sensors which constantly monitor the environment. These sensors record data including air quality, noise, temperature, humidity, and CO2 together with water leak detection and door access. All these sensors work via Bluetooth and connect to the WiFi APs as part of the Eco WiFi solution.

Easy Payment Terms

Whether you opt for a Capex or Opex model, Smart Wireless with Cisco can offer various payment options spread over 36-60 months. You can choose to purchase the solution outright or lease the hardware over a set period. If you decide to lease, you have the choice at the end of your contract to either refresh your hardware or return it and we will recycle it for you via Cisco's circular economy program.
